

Installation and maintenance – safe, efficient and reliable

Area of Application and Target Group

Our installation and maintenance services are designed for companies in the chemical, cosmetics, food, pharmaceutical, and paint and coatings industries, where operational safety, process stability, and plant availability are key priorities. We support both new customers with the installation and commissioning of new systems and existing customers with installed VISCO JET® agitator systems throughout their entire life cycle, including applications in ATEX

areas. Our goal is to ensure the reliable, safe, and cost-effective operation of your systems. Our services are particularly suited for companies that want installations to be carried out efficiently, on schedule, and professionally, without tying up their own internal resources for planning, coordination, and execution. At the same time, we support customers who require structured and predictable maintenance to prevent downtime and extend the service life of their systems

– without the need to monitor maintenance intervals themselves. VISCO JET® provides a complete service from a single source – from installation and maintenance to preventive measures. The result: minimized downtime, stable processes, and maximum planning reliability for your production.

Service Description

Installation

- ☒ **Comprehensive project handling** – planning, organization, execution, and follow-up of simple and complex installations; third-party installations available on request
- ☒ **Initial commissioning** – safe and efficient commissioning of your system on site
- ☒ **Training of operating personnel** – hands-on training directly at the system
- ☒ **Coordination of external service providers** – e.g. tank manufacturers or other project partners, if required

Maintenance

- ☒ **Regular maintenance according to the maintenance contract** – individually tailored to your systems and operating conditions
- ☒ **Comprehensive maintenance services** – inspection and replacement of spare and wear parts, oil changes, lubrication of all relevant components, regular replacement of radial shaft seals, inspection and replacement of safety-critical components
- ☒ **Fast response times in case of malfunctions or failures** – prompt scheduling of service appointments to minimize downtime
- ☒ **Preventive maintenance measures** – early identification and elimination of potential sources of failure

Why Choose VISCO JET®?

- ⇒ **Safety** – safety-related inspections and professional execution ensure maximum operational safety
- ⇒ **Efficiency** – short response times, structured processes, and preventive measures reduce downtime
- ⇒ **Flexibility** – customized service concepts for new systems, existing plants, and specific requirements
